EDUCATION

Stony Brook University

M.S. Computer Science · GPA: 3.85

B.S. Computer Science & Applied Mathematics · Double Major · GPA: 3.83

Stony Brook, NY

Aug 2024 – May 2026

Aug 2021 – May 2025

EXPERIENCE

Software Developer Intern · HavenSmart LLC · Remote

May 2025 – Present

- Developed SuiteScript (JavaScript) workflows and RESTlets to automate data syncing within NetSuite, reducing manual data entry time by 60% and saving the team 10+ hours of processing work per week
- Optimized the Celigo integrator.io data connector between NetSuite and D-Tools by debugging cross-platform field mappings and sync logic, improving data accuracy by 75% and cutting sync errors by half
- Developed Python validation and transformation scripts to process and normalize 50K+ CRM and ERP records before import, improving migration reliability and preventing schema inconsistencies across integrated systems
- Tested and validated RESTlet endpoints with Postman across NetSuite workflows, surfacing integration bugs and contributing fixes that reduced post-deployment issues within an Agile sprint cycle

Backend Developer Intern · Ding Carpool · Remote

Dec 2024 – May 2025

- Architected a Node.js/Express backend supporting authentication, ride matching, trip history, and real-time notifications through 25+ REST APIs with MongoDB persistence, improving response consistency by 30%
- Implemented real-time ride updates using Socket.io, enabling live driver-passenger status syncing that contributed to a 25% increase in beta user engagement during launch testing
- Wrote unit tests with Jest for API routes and data models, catching edge cases in ride-matching logic before staging and reducing back-and-forth with QA during sprint review cycles

AI Software Developer Intern · Mavn AI · Remote

Jul 2024 – Dec 2024

- Built a Python-based internal evaluation pipeline to batch-test AI prompt templates against expected outputs, cutting manual review time by 40% and enabling the team to iterate on prompt quality twice as fast
- Designed benchmark-driven evaluations for 100+ LLM prompt workflows across ChatGPT and Bard, identifying failure modes and improving response accuracy by 15% across internal test suites
- Participated in cross-language code reviews across Python, Ruby, and Bash, flagging logic errors and style issues that contributed to a 30% reduction in defects identified during QA cycles

Lead Technologist · Stony Brook University – Division of IT · Stony Brook, NY

Jan 2022 – May 2025

- Resolved 500+ Brightspace LMS and platform issues for 15,000+ students, contributing to a 75% improvement in platform uptime through consistent triage, documentation, and escalation support
- Facilitated 20+ technical training webinars for 30+ faculty participants, doubling platform adoption in target departments and reducing related support tickets by 50%

PROJECTS

DevFlow — Developer Productivity Dashboard | React, TypeScript, Node.js, PostgreSQL, Docker, AWS

- Built a full-stack SPA consolidating GitHub activity, a Kanban task board, and CI/CD pipeline status into one real-time dashboard, reducing context-switching for developers managing multiple tools
- Designed a RESTful Node.js/Express API with PostgreSQL persistence and JWT-based authentication, using WebSockets to push live updates to connected clients with sub-100ms latency
- Containerized with Docker Compose for portable local development and deployed to AWS EC2 via a GitHub Actions CI/CD pipeline, maintaining 99%+ uptime over the first 60 days of public availability

DocMind — RAG-Powered Document Q&A Assistant | Python, LangChain, OpenAI API, ChromaDB, FastAPI, Docker

- Built an end-to-end RAG pipeline using LangChain and ChromaDB — handling document ingestion, text chunking, embedding generation, and vector similarity search to retrieve relevant context before each LLM call
- Implemented Redis-based response caching for repeated queries, input/output guardrails to filter unsafe prompts, and structured logging for observability — reducing average response latency by 35% and flagging ~12% of inputs as out-of-scope
- Exposed the pipeline via a FastAPI REST endpoint with streaming support, containerized with Docker, and validated across 150+ diverse document queries with consistent source-cited responses and no hallucinated citations

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C/C++, SQL, HTML/CSS, Bash

Frameworks & Libraries: React, Node.js, Express, Angular, Flask, FastAPI, Socket.io, Pandas, NumPy

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

Cloud, DevOps & Infrastructure: AWS, Docker, GitHub Actions, CI/CD Pipelines, Git, Linux

Testing & Tools: Jest, Junit, Postman, JIRA, Agile/Scrum, REST APIs

AI & ML: LangChain, OpenAI API, RAG, Prompt Engineering, AI Agents, PyTorch, Scikit-learn, NLP
